Wood you like?

The “Calibro” Collection comes from the idea of creating a line of oak wood floors to meet the most different needs and tastes with a product that guarantees maximum versatility and stability. With its narrow section and the different installation patterns it allows to enhance even small-sized environments and, at the same time, to enhance the material in its natural colors and elegant finishes.
I Love Parquet has had a close relationship with Fep (The European Federation of the Parquet Industry) for about a year. Every edition of the Fep journal talks about the efforts being made to promote the wood floor sector. I am very proud of this collaboration because I have followed and appreciated the federation’s work for some time. Through the years it has been able to gain the respect and just recognition of Brussels through its responsible, expert competence and it has worked for the common interest but, above all, has investigated the best strategies to use to increase the market share of our wonderful product. Fep was one of the supporters of recent research commissioned by Cepi (The European Confederation of Paper Industries) to calculate the effect of timber and timber products as ‘carbon absorbers’. I’ll only mention one finding (you can find more details on page 38 of this edition): the total positive effect of timber and wood-based products on the climate is estimate at -806 tons of equivalent CO₂ per year (equivalent CO₂ is a unit of measurement which can weigh different greenhouse gas emissions with different climate-changing effects together) which corresponds to about 20% of all the fossil emissions in the European Union.

To put it simply, products from forests have a very low carbon footprint, as well as reducing the demand for energy based on combustible fuels. In short, all (or nearly all) of us know that timber is sustainable. It is completely recyclable, as its production, processing and disposal uses far less energy than any other type of building material and, most importantly, thanks to the combined effects of “carbon sink” (carbon absorption) and “carbon stock” (ability to treat carbon) it helps to reduce carbon emissions. However, we never knew how sustainable it was. This research seems to me to be a formidable marketing tool. To be read and repeated to clients, partners and stakeholders as a mantra.
ABOUT EUROPEAN BAUHAUS
Using as a starting point a project of the European Commission, this cycle of digital conferences analyse the studies of Curators, Designers, scholars and Museum Directors from European countries reflecting on topics of design, architecture, demography, new technologies and renewable energy to share proposals in this particular moment in European and world history. The online meetings, scheduled between November 2020 and March 2021, include appointments with various European nations.

“One of our sessions is called ‘Facing the future’, which could also serve as general theme of the hour”, explains Dr. Reinhard Pfeiffer, Deputy Chairman of the Board of Messe München. “BAU Online will provide valuable guidance in turbulent times. Together with our partners, we have put together a substantial program with many experts from the construction industry, science and politics.” The program will consist of three pillars: Forum Future of Building, BAU TV, Studio Bund.

A New European Bauhaus
Online
Until march 2021
triennale.org

CORONAVIRUS, CLIMATE, URBAN, DEVELOPMENT
BAU Online’s conference program from January 13 to 15, 2021 will be varied and rich in content. All sessions in the three conference panels will be guided by the key themes “Digital transformation”, “Challenge of climate change”, “Resources & recycling” and “Homes of the future.” And the Covid-19 pandemic’s effects on architecture and the construction industry will also be examined.

MAKING THE BEST CHOICE TO BUILD THE FUTURE.

It’s been 15 years since we have started an awareness campaign focused on reforestation, from that moment our attention has been turned to socio-environmental problems and to the future of our planet. Idea is very simple: replant the same quantity of trees needed to produce our wood floors.

FRIULPARCHET s.r.l. | Via Marespo 3, 33100 Udine | +39 0432 233400 | info@friulparchet.it | www.friulparchet.it | Follow us on
POSTPONED
Responding to market requests, the date of the world’s leading trade show for carpets and floor coverings in May has been brought forward by two days. Following the postponement of Domotex from January to May 2021, exhibitors from the D-A-CH region have expressed reservations about holding the event including the beginning of the Whitsun weekend.

Following renewed intensive discussions with our stakeholders and their concerns, the decision has now been taken: The next Domotex will take place from 18 - 20 May 2021 (Tuesday to Thursday). As already announced - Domotex is planning to hold a digital conference on January 15, 2021, the original trade show launch date. Further information will be available shortly.

SEPTEMBER EDITION
Finally it’s possible to know the dates, following lengthy and wide-ranging discussions between the Management of the Salone del Mobile and Fiera Milano, allocated the delicate task of finding the best possible solutions to enable the Salone del Mobile.Milano 2021 to go ahead, whilst guaranteeing safety in light of the ongoing pandemic. The sixty-sixth edition of the Salone will be held in 2021, not in April as is traditional, but from 5th to 10th September.

President of the Salone del Mobile, Claudio Luti, had this to say: “Being able to hold the Salone next year is an absolute priority for all those of us whose lives revolve around design. We have tried very hard over the last few weeks not to make proclamations or announcements that might subsequently have to be denied or revised in view of the evolving situation. Moving the dates of the Salone del Mobile is not just a matter of rejigging the calendar, it also has to consider the many days needed to set up and dismantle the various pavilions, which in turn have to fit in with the demands of many other fairs held in the Fiera Milano spaces. Now that we have achieved the best possible all-round solution, thanks to the collaboration of Fiera Milano, we are in a position to confirm the new date. We also believe that moving the fair to September will leave enough time for the ongoing acute phase of the pandemic to subside and that this will provide a real chance to kickstart design at global level. We all need the Salone in Milan”. The 60th edition will bring together for the first time all the product categories, representing a special moment.
BUSINESS IS THE NEWS

PANTONE SELECTS TWO SHADES AS ITS COLOURS OF THE YEAR FOR 2021

Pantone, the global color authority and provider of professional color language standards and digital solutions for the design community, announced 17-5104 Ultimate Gray and 13-0647 Illuminating, as the Pantone Color of the Year selection for 2021, two independent colors that come together to create an aspirational color pairing, conjointing deeper feelings of thoughtfulness with the optimistic promise of a sunshine filled day.

“The selection of two independent colors highlight how different elements come together to express a message of positivity supported by fortitude - said Leatrice Eiseman, Executive Director of the Pantone Color Institute - Practical and rock solid but at the same time warming and optimistic, this is a color combination that gives us resilience and hope. We need to feel encouraged and uplifted, this is essential to the human spirit.”

BAUWERK GROUP: NAME CHANGE AND RELOCATION

The Extraordinary General Meeting of Bauwerk Boen AG approved the name change from Bauwerk Boen AG to Bauwerk Group AG. The relocation of the headquarters from Wallisellen/ZH to St. Margrethen/SG was also approved.

The Bauwerk Group sells its products under the well-known brands Bauwerk Parkett and Boen. The market development is designed for the respective sales channel and the geographic markets. The proven market presence of the two brands Bauwerk and Boen will be continued.
The Board of Directors of FEP - the European Federation of the Parquet Industry - met virtually on 8 October 2020 and discussed, amongst others, the parquet situation and the continuous impacts of the Covid-19 crisis on the European markets. A brief per country recap is provided in the table.

### Austria
The situation has started to improve in May. Renovation continues to be the parquet consumption driver and supports the recovery. However, for the whole year, a slight decline of the market compared to 2019 is forecast.

### France
After a restart of the consumption mid-May, the situation in France is now “neither bad, nor good”. The contract business is significantly decreasing, but the impacts of this decrease will only be visible in 2 years as for the time being existing contracts are completed. DIY is performing well.

### Germany
While the parquet market was subdued in April and May, the trends upturned during the summer and are now very positive in Germany and until the end of the year. New projects are decreasing but renovation is on an increasing path.

### Italy
Until August, the Italian market has recovered from the lockdown period, especially in the south of the country which has been less affected last spring. Parquet consumption then slowed down in September but renovation is driving the market while contract business is lower. All the losses from spring will not be compensated but a stable result or a slight decrease only is expected for the year 2020 as a whole.

### Nordic Cluster
Nordic cluster parquet market has also been hit during spring. New buildings are down but renovation is strong, especially in Norway. In total, the market is improving.

### Switzerland
After a flat 3rd quarter, especially in French and Italian speaking parts of the country, slightly positive trends are now observed on the Swiss parquet market. Renovation is the main driver but alternatives to wood solutions benefit the most. A stagnation is expected for the 4th quarter and the whole year 2020.

### UK - Stable
The country has been harshly hit by the pandemic and its market situation is comparable to the south of Europe with a recovery during the 3rd quarter. Nevertheless, the uncertainties related to the Brexit are impacting activities.

### Sweden
Sweden has been an “island” these last months. The parquet market is a bit down, with less investments, but this is due to structural changes and not a consequence of the pandemic. On the one hand, commercial and hospitality businesses are really challenging. On the other hand, renovation represents a strong market as people are investing in their homes (offices). No significant evolution of the situation is expected by the end of the year but the 4th quarter should be positive.

### Switzerland
After a flat 3rd quarter, especially in French and Italian speaking parts of the country, slightly positive trends are now observed on the Swiss parquet market. Renovation is the main driver but alternatives to wood solutions benefit the most. A stagnation is expected for the 4th quarter and the whole year 2020.

Progress Profiles innovative and patented PRODESO® HEAT SYSTEM for electrical walls and floors heating ensures pleasant warm and comfortable environment with short laying times and at low cost. The system can be used on all kinds of substrate thanks to the membrane uncoupling and waterproofing properties. Temperature and operating times can be controlled from a latest generation thermostat that also guarantees significant savings in energy costs. The system is quick and easy to install in all conditions and has an overall thickness of only 5.5 mm, far thinner than any alternative system. It is also maintenance free over time. This smart, responsible technology supports the growing demand for sustainable solutions and energy saving while also satisfying the needs of contemporary architecture and evolved home automation. A world of natural, warm wellbeing.

**NEWSROOM**
La bellezza dei nostri pavimenti in legno è speciale perché 100% naturale. Natura intatta e sana, fonte di profondo benessere.
The beauty of our wood floors is special because it is totally organic. Untouched and healthy nature, source of deep wellness.
New wave
This modern pendant light is made from two pieces of wood veneer, one set inside the other, that feature two distinct yet complementary colors. The two pieces of wood are bent and shaped into a seemingly endless, sinuous shape which produces the effect of solidity while simultaneously achieving an elegant structural balance.

Jannis
Jannis is defined by a contemporary rigour that draws inspiration from the past, revealing its personality in the details: the wooden structure, lightweight to the eye but solid, holds the single seat cushion and the backrest, and is characterized by the metal feet with a brass finish of the feet. The front leg rises to define the thin profile of the armrest and closes in the semi-circular tip, again with a brass finish. The frame and legs are connected by steam-curved beech wood arches, an element of continuity with the heritage of Gebrüder Thonet Vienna.

Wooden Dolls
The Wooden Dolls by Alexander Girard are a large family of wooden figures representing human and animal characters. Girard designed them in 1952 for his own use as decorative objects in his Santa Fe home. These originals, which are part of the Girard estate in the holdings of the Vitra Design Museum, served as models for the current re-editions. Precisely replicated down to the last detail, the many different Wooden Dolls are still fabricated and painted by hand today, just like the vintage pieces by Alexander Girard.

Fly Agaric
The fantastic properties of this mushroom will fill the room with good vibes. Fly Agaric makes a collectable, or a gift for that special fun-loving person. Designed by Geckeler Michels.

The Dots from Muuto
Designed by Norwegian designer Lars Tornøe, The Dots is a series of three different sized coat hooks available in different colours. They suit a wall with or without clothes and you can arrange them on your wall in the pattern you like.

Ademar Coffee Table
A solid structure combined with a sober design: Ademar is a new and elegant Table Collection proposed by Bross and designed by Giulio Iacchetti. It is possible to choose between natural oak, thermo-treated oak and Canaletto walnut top finishes.

Eco-sustainable, reusable, without glue, with high acoustic comfort.
A SURPRISE IN THE BASEMENT

A sophisticated space with all the elements of the good life. An air-conditioned space with a modern kitchen, dining room, sitting room and Spa. And a high-class floor which brings everything together.

TITO FRANCESCHINI
Elegance, harmony of colours and shapes, clever use of lighting and the magic of wood have made this a really unique space. We’re in a villa near Lake Garda. Our photographs show a ‘basement’, but this description does not do justice to a space which is sophisticated with all the plenitude of the good life. An air-conditioned cellar to store and taste wine, a modern, functional kitchen for preparing meals for friends, with a dining area. A living room to relax in after swimming in the heated swimming pool or taking a sauna, which are part of the spa, separated from the rest of the space by glass walls. The interior design has clean lines, broken up by colours which range over the sofas and the interior decor. The Firenze oak floor adds a classic and elegant note and is laid in Italian herringbone style with the characteristic right angle (90°) of the slats which make it up. Herringbone is one of the oldest flooring designs. It can even be found in the first century AD. The ancient Romans used it to lay the blocks of clay from which they built the roads. It started to be used for wood floors in the XVII century inside palaces and in the homes of upper class Italians.
• Project: interior design studio
  “Ligorio Paste architects”
• Floors: Firenze colour oak laid in Italian herringbone by Garbelotto
• Laying: Italian herringbone, with the characteristic right angle (90°)

Getting to know timber: Zygia racemose (Marblewood)

It was the French cabinetmakers who discovered the originality of its striations and introduced it into the luxury furniture market. A close-up of a truly fascinating tree

GIANNI CANTARUTTI

Bostamarinde (Zygia racemose), known internationally as Marblewood, is a high-quality timber species, in high demand, used in different furniture sectors and, in very exclusive places, as flooring and cladding.

The tree of this species grows in north-east South America (Guyana, Brazil, Venezuela) and can reach a height of about 30 metres and an average diameter of 60 centimetres. Once they had discovered it, it was the French cabinetmakers who took it from the French Guyana Amazon forest naming it ‘bois serpent’ and introduced it into the luxury furniture market. Its timber is golden yellow with brown striations, sometimes bordering on black. This timber is sought-after by designers and architects for its appearance. In fact, its unique striations resemble some valued types of marble.

Although it is not easy to work with because of the high density of the timber, after it has been ‘cleaned’, all the beauty of its shades of brown on a brownish yellow background is revealed and makes it the main protagonist of any environment where it is used. Matching it with other single colour materials makes highly decorative, elegant spaces.

PHYSICAL AND MECHANICAL CHARACTERISTICS

The main physical and mechanical characteristics of Bostamarinde are its high resistance to damage, its hardness and its specific weight (not too much for the ways in which it is used). When working with it, protective masks are highly recommended to avoid breathing in dust whose smell is like the smell of particularly stinky excrement. This is where it gets its local name of Bostamarinde. You can see examples of designer furniture in this wood in my world of wood xyloteca in San Giovanni al Natisone (Udine) as well as cross-sections of a particularly fascinating timber.
FIRST RENOVATION LACQUER
No sanding and multi-surfaces

Long lasting renovation without sanding down or replacing the floor

- Multi-surfaces: all wood floor finishes, laminated floors and PVC, vinyl, LVT floors
- Conceals scratches*, revives tarnished floors
- Single coat system
- Perfect adhesion, excellent grip, without primer
- High chemical and scratch-resistance
- 2-component with hardener

*Surface wear & tear: regular use and small scratches

Imagine opening the door and leaving behind the noise, chaos and rhythms of the city to immerse yourself in a safe, healthy and solid place. Your home.

This project, like all those of Fiemme Tremila, is inspired by the concept of well-being in the home environment. The floor must act as a natural connection between the woods and the house: in this case made by a beautiful chevron pattern in Nocciolieve essence, one of the thermowood oaks from the Luci di Fiemme collection.

Fiemme Tremila was born from a forward-looking vision: to offer a unique, natural and absolutely healthy and biocompatible product. Our dream and our promise are to surround our customers’ homes with nature and enhance their well-being. For this reason we have thought of a product designed and manufactured to last a lifetime and only made with natural materials and procedures. A totally biocompatible product, articulated in rich and variable collections able to accommodate and satisfy different customers’ styles and tastes.

FiemmeTremila.it

NOCCIOLIVE

Le spine collection

Le spine collection by Tavar is available in two different sizes and three patterns: Italian herringbone (90°), French herringbone (45°) and Hungarian herringbone (60°). These trendy and timeless patterns are ideal for both modern and vintage design styles.

Tavar is a story about men, women and love for wood since 1950. Tavar strives to guarantee quality. The 100% made in Italy certification guarantees high technical standard. Tavar has always been attentive to designers and customers needs. The history of the company is made of professionalism, dedication and passion for wood.

In photo: French herringbone in natural European oak.

Tavar.it
Evo Garant Collection adds some new finishes in 2020 with silver and golden powder. A refined product like Ethico, whose finishes come from the natural reaction between salts and plant extracts, today lights itself up with precious powders to enhance the grain of the wood and emphasize its true nature!

Wood conformation is comparable to a fingerprint, as each table is different from the other. The particular “salt” treatment to which Ethico is subjected enhances its unique characteristics, the chromatic differences - even important ones - identify its authenticity, making use of a multitude of artificial materials that are “real wood”.

coraparquet.it

THE ECLECTIC FORMAT FOR SPECTACULAR PARQUET FLOORS
Arrow by Woodco is the new parquet format that allows you to free your imagination and give shape to infinite laying designs. Real tribute to simplicity and uniqueness, because no element is the same if not in size (45 x 450 x 14 mm), Arrow allows you to create not only Italian herringbone designs, but also combinations, weaves and customized modular patterns. Part of the Signature collection, dedicated to architects and interior design lovers, it is available in eight different colours, all made of fine brushed Slavonian Oak.

woodco.it
100% MADE IN ITALY

In the heart of Trieste, a central European city, the choice of wooden floors fall on elegant and refined Natural Oak Noblesse® Herringbone, one of the oldest laying floor geometries. The wooden pieces inclined at 45° or 60°, placed head to head, give a precious and classy floor that makes the rooms unique with its unmistakable design, creating a symphony of shapes, lights and materials. Garbelotto Noblesse® Herringbone is also available in Clip Up System installation.

Parchettificio Garbelotto is a leader in the production of 100% made in Italy wooden floors. Since 1950, passion and style have sealed a creative union between innovation, art and design. All products are suitable for green building, eco-sustainable and certified, respect the environment and the raw materials come from controlled reforestation areas. The research and development department continually studies new proposals to meet the needs of the interior design world.

Gautier

The Gautier model in the Giorio Herringbone Collection by Alma, is reminiscent of the charm of old Parisian streets, where ancient and modern mingle to create new, elegant harmonies. Small 50 mm slats create a dense interlocking puzzle which highlights the most authentic characteristics of the wood.

This parquet gives an original, sophisticated touch to any kind of space and can be matched with very different styles making it perfect for those who like to have a discreet originality.

almafloor.it
FASHIONS CHANGE, PARQUET STAYS

Wood has made a comeback and is an indisputable part of our homes. As well as being one of the few renewable and ecological raw materials, it adapts to every kind of living space, becoming a symbol which does not rely on fashions or seasons. Herringbone designs are becoming more and more popular, from the Italian 90° to the French 45° and the Hungarian 30° angles, they have the ability to make the most of any space.

Oak is the most sought-after wood because of its classic grain and shades as well as its suitability for tinting and colouring.

friulparchet.it
VELVET
Keeping up with the latest design trends, Bruno’s collections include a wide selection of options suitable for herringbone 90° or chevron 45° laying. For this sophisticated bathroom, the client has chosen an elegant product from the collection VELVET, a 2 layer prefinished wood flooring with 4 mm thick top layer and CARB (California Air Resources Board) certified back support. Perfectly combining tongue and groove joints are the essential feature for planks to be laid as herringbone, and opting for a reliable artisan for the laying can make the difference too. Bruno always recommends and chooses skilled professionals artisan floor layers with longtime experience.

brunoparquet.it

What else do you need, when you’ve found your perfect match? Pedross veneer covered skirting boards - the perfect match for your precious wood floor.
Earlier this year (cf. FEP pages in I Love Parquet International n. 24, May 2020), we have briefly presented the: “EU Forest-Based Industries 2050: A vision of sustainable choices for a climate-friendly future” which highlights the positive role to be further played by wood and wood products in tackling climate change. As other Forest-Based and Woodworking Industries European associations, FEP has been involved in the preparation of this Vision and is one of the supporting organisations.

Within this framework, FEP is also a supporter of the new study commissioned by Cepi - the Confederation of European Paper Industries - and called “EU Forest-Based Industries 2050: CO2 effect calculation supporting sector’s vision of sustainable choices for a climate-friendly future” (“Climate effect of the forest-based sector in the European Union” by Dr Holmgren, former Director General of the Centre for International Forestry Research, Sweden).

**STUDY’S EXECUTIVE SUMMARY**
The European forests and the Forest-Based sector provide integrated solutions to the global climate challenge on a very large scale. More specifically, the overall and positive climate effect is estimated at -806 million tons of CO2 equivalent annually (CO2e/yr). This corresponds to approx. 20% of all fossil emissions in the European Union.

The overall climate effect is calculated as a sum of:
- The increased carbon storage in forests (-406 Mt CO2e/yr) and in wood products (-41 Mt CO2e/yr) for a total of -447 Mt CO2e/yr (net carbon sink),
- Prevented fossil emissions by substituting fossil-based materials and fossil energy: industrial products -394; traditional energy -16; for a total of -410 Mt CO2e/yr.
- The key to appreciate the large contributions of forests and the Forest-Based sector is the perspective of an integrated and circular bioeconomy. CO2 is removed from the atmosphere in very large quantities and stored in growing forests. The carbon eventually circulates back into the atmosphere to close the loop. Part of this carbon is stored, for a longer or shorter period, in a variety of forest products before re-entering the natural biogenic carbon cycle. Forest products have a very low climate footprint and moreover they reduce demand for products and energy that are based on fossil fuels. This prevention of fossil emissions, or substitution effect, is well known but has not previously been visualized and quantified at the European level. Existing climate reporting and climate policies are not structured to
ABOUT FEP
The European Federation of the Parquet Industry (FEP) reunites European national parquet federations, parquet manufacturers and suppliers to the industry. It is the main body representing and defending the interests of the European parquet industries at all relevant levels. The activities of FEP are situated in the areas of raw material supply, production, market and internal affairs. Typical examples of work items are: The collection of market data in FEP territory and beyond; The follow-up of relevant European legislation and standardisation; The publication of newsletters; The organisation of an annual European Parquet Congress; The initiation of market research related to parquet flooring; The promotion of personal contact and communication amongst its members.
parquet.net

MAKE THE FOREST-BASED INDUSTRIES’ VISION FOR SUSTAINABLE CHOICES A REALITY

The study reinforces the commitment of the Forest-Based Industries to provide the most competitive and sustainable net-zero carbon solutions by:
• Substituting CO2-intensive raw materials and fossil energy with forest-based alternatives,
• Eradicating waste and boosting recycling with ambitious sector targets for material collection and recycling for all wood-based products,
• Driving resource efficiency and enhancing productivity in all areas including materials, manufacturing and logistics.

As the Forest-Based Industries (F-BI) can meet the society’s current and future needs with non-fossil materials, they anticipate a growing demand for wood and wood-based products that they expect to be translated into F-BI market growth of 3% annually. The study has been already communicated to the relevant Directorates-General of the European Commission to be considered in the debates on the EU Green Deal, Climate Pact, Target 2030, New Circular Economy Action Plan, Sustainable Products Initiative, Green Recovery, Biodiversity Strategy, Forest Strategy... It will be officially launched in September and used, together with the Vision 2050 issued earlier this year, during the EU Green Week and the EU Raw Material Week to be held in October and November 2020. The study is available on request to the FEP secretariat - info@parquet.net.

Wood. Dance to a different tune.

In defence of the original.

Wood used in building comes from forests with controlled timber felling. It is a completely renewable material which requires very low levels of energy in the production processes. A wood floor helps to maintain an ideal micro-climate inside the house, softens the falls of those just learning to walk and can be restored an infinite number of times.

Choose a wood floor. Sounds like music to your ears?
I have often been concerned with formaldehyde and have written many technical and informative articles about it. But maybe I have never mentioned one rather important aspect of this substance, its ‘ubiquity’. What does the word ‘ubiquity’ mean and what has it got to do with formaldehyde?

Ubiquity simply means ‘to be present everywhere’ and formaldehyde really does have the characteristic of being found a little everywhere.

Perhaps it’s not well known that formaldehyde is one of the most common substances in the immense interstellar spaces of the universe and that it has also been detected in the atmospheres of some planets near the Earth like Venus and Mars. However, a bit nearer to us, we find that formaldehyde is easily formed by common combustion processes and some research shows its specific formation in conifer forests through photochemical reactions involving some terpene based compounds emitted by the trees themselves.

But formaldehyde’s ‘ubiquity’ is even greater as it is also present inside us as it is a by-product of some of our body’s metabolic processes. So, even though in very low doses, formaldehyde can be found even inside our cells and our blood.

FORMALDEHYDE AND SOLID WOOD

Solid wood also contains formaldehyde, although in fairly small quantities, but natural formaldehyde can be detected and measured in all wood based materials. Various studies have been carried out about this and have shown that formaldehyde is formed from the main components of wood (cellulose, hemicellulose and lignin) as well as its extractives.

The concentrations found vary depending on the species of plant and on various other factors including, for example, drying process temperatures, the time taken for these processes and the initial and final humidity of the wood. The quantity of formaldehyde measured in...
In conclusion, the ubiquity of formaldehyde, the theme of this article, also evidently includes wood where it can be found naturally, independently of the industrial processes which the wood might subsequently undergo. This finding necessitates reflection on its danger and on the consequent limitations. As shown above, it is not possible to expect or look for a material which does not contain formaldehyde, or in other words has zero formaldehyde content. This is certainly not possible for wood-based products since they contain natural formaldehyde as mentioned above. Slogans like ‘formaldehyde free’ need to be looked at carefully, both to check on their veracity but also so as not to exaggerate this topic and provoke negative perceptions of everything to do with wood and furniture. In fact, in the long term, the market may start to consider the natural presence of formaldehyde in rough wood as a negative factor when compared with other materials and therefore lose faith in all the products in our sector.

**BIBLIOGRAPHY**
